

4" BADGER

Rotary Cleaning for Medium Pipes with Elbows

The 4" Badger self-rotary tool makes cleaning pipes with elbows easy, navigating 4 inch (102 mm) bends with controlled rotation which is important for efficiently cleaning larger pipes. The operator can choose between two rotation speeds by selecting fast or slow viscous fluid.

COMPETITIVE ADVANTAGES

- Navigates 90° elbows in pipes as small as 4 inches (102 mm) at up to 43.5k psi (3000 bar)
- Different jetting configurations allow for more or less pull and forward hitting power
- Easy to use and service
- Rotary tools remove the operator from the potential dangers of manually twisting high pressure hose and eliminate the need for expensive rotary hose devices (RHDs)
- Designed to easily pair with the AutoBox ABX-500 hose handling system for hands-free pipe cleaning

QUESTIONS TO ASK YOUR CUSTOMER

- What type of cleaning is required — hard scale, soft material flush or completely plugged?
- Are there any bends or vertical climbs in the pipe between access points?
- What size and length of hose are you using?
- What pressure and flow are you operating?
- Do you need an adapter?
- Do you need a backout preventer?
You should always use a backout preventer with high pressure pipe cleaning tools.
- Do you need a centralizer or stinger?

OTHER INFORMATION

- The 4" Badger can be used with the AutoBox ABX-500 for a complete hands-free pipe cleaning solution.
- A stinger or centering device is required when the ID of the pipe is 1.5 times larger the diameter of the tool being used, as described in the WJTA Recommended Guide.
