Badger Model Features

2"	<ul style="list-style-type: none"> The only self-rotary tool on the market that can navigate 2 in. (50 mm) lines with bends and comes with head locking technology for increased safety Head options allow the tool to be optimized for a variety of pump pressures and flows - unplug, polish, or run longer lines based on jetting Optional fairing available to streamline tool during retrieval
4"	<ul style="list-style-type: none"> Different jetting configurations allow for more or less pull and forward hitting power Navigates elbows as small as 4 in. (102 mm) at up to 22k psi (1500 bar) Self-rotary, speed controlled head provides complete internal coverage with optimum jet delivery Two speeds to choose from to maximize cleaning by choosing slower speeds for hard to clean or plugged lines, and faster speeds for polishing easy to clean lines with a single tool Multiple jetting options optimize the tool for a variety of pumps pressures and flows - unplug, polish, or run longer lines based on jetting Designed to easily pair with the AutoBox ABX-500 or ABX-PRO hose tractors for hands-free line cleaning.
6"	<ul style="list-style-type: none"> Features adjustable speed control for fine-tuning to specific requirements Different jetting configurations allow for more or less pull and forward hitting power and optimize the tool for a variety of pumps pressures and flows. Navigates elbows as small as 6 in. (152 mm) Speed controlled rotary tools provide complete internal coverage with optimum jet delivery Maximize cleaning by choosing slower speeds for hard to clean or plugged lines, and faster speeds for polishing easy to clean lines with a single tool Centralizer options for larger line sizes available Designed to easily pair with the AutoBox ABX-500 or ABX-PRO hose tractors for hands-free line cleaning.

WARNING AND SAFETY INSTRUCTIONS

OPERATOR TRAINING

Managers, Supervisors, and Operators **MUST** be trained in Health and Safety Awareness of High-pressure Water Jetting and hold a copy the Water Jetting Association (WJA) Code of Practice, or equivalent (see www.waterjetting.org.uk).

Operators **MUST** be trained to identify and understand all applicable standards for the equipment supplied. Operators should be trained in manual handling techniques to prevent bodily injury.

StoneAge has designed and manufactured this equipment considering all hazards associated with its operation. StoneAge assessed these risks and incorporated safety features in the design. StoneAge **WILL NOT** accept responsibility for the results of misuse.

IT IS THE RESPONSIBILITY OF THE INSTALLER/ OPERATOR to conduct a job specific risk assessment prior to use. Job specific risk assessment **MUST** be repeated for each different set up, material, and location.

The risk assessment **MUST** conform to the Health and Safety at Work Act 1974 and other relevant Health and Safety legislation.

PERSONAL PROTECTIVE EQUIPMENT REQUIREMENTS

Use of Personal Protective Equipment (PPE) is dependent on the working pressure of water and the cleaning application. Managers, Supervisors, and Operators **MUST** carry out a job specific risk assessment to define the exact requirements for PPE. See Protective Equipment for Personnel (Section 6) of WJTA-IMCA's Recommended Practices For The Use Of High-pressure Waterjetting Equipment for additional information.

Hygiene - Operators are advised to wash thoroughly after all waterjetting operations to remove any waterblast residue which may contain traces of harmful substances.

First aid provision - users **MUST** be provided with suitable first aid facilities at the operation site.

Operators **MUST** read, understand, and follow the Operational and Training Requirements (Section 7.0) of WJTA-IMCA's Recommended Practices For The Use Of High-pressure Waterjetting Equipment, or equivalent.

Operators **MUST** read, understand and follow the Warnings, Safety Information, Assembly, Installation, Connection, Operation, Transport, Handling, Storage, and Maintenance Instructions detailed in this manual.

The risk assessment **MUST** consider potential material or substance hazards including:

- Aerosols
- Biological and microbiological (viral or bacterial) agents
- Combustible materials
- Dusts
- Explosion
- Fibers
- Flammable substances
- Fluids
- Fumes
- Gases
- Mists
- Oxidizing Agents

PPE may include:

- **Eye protection:** Full face visor
- **Foot protection:** Kevlar® brand or steel toe capped, waterproof, non-slip safety boots
- **Hand protection:** Waterproof gloves
- **Ear protection:** Ear protection for a minimum of 85 dBA
- **Head protection:** Hard hat that accepts a full face visor and ear protection
- **Body protection:** Multi-layer waterproof clothing approved for waterjetting
- **Hose protection:** Hose shroud
- **Respiratory protection:** May be required; refer to job specific risk assessment

WARNING

Operations with this equipment can be potentially hazardous. Caution **MUST** be exercised prior to and during equipment and water jet tool use. Please read and follow all of these instructions, in addition to the guidelines in the WJTA Recommended Practices handbook, available online at www.wjta.org. Deviating from safety instructions and recommended practices can lead to severe injury and/or death.

- Do not exceed the maximum operating pressure specified for any component in a system.
- The immediate work area **MUST** be marked off to keep out untrained persons.
- Inspect the equipment for visible signs of deterioration, damage, and improper assembly. Do not operate if damaged, until repaired.
- Make sure all threaded connections are tight and free of leaks.
- Users of all Badger Tools **MUST** be trained and/or experienced in the use and application of high-pressure technology and cleaning, as well as all associated safety measures, according to the WJTA Recommended Practices for the use of High-pressure Waterjetting Equipment.
- Install mechanical stops, stingers and back out preventers as appropriate when doing any tube, line or vessel cleaning.
- Always de-energize the system before servicing or replacing any parts. Failure to do so can result in severe injury and/or death.

PRE-RUN SAFETY CHECK

Refer to WJTA-IMCA's, Recommended Practices For The Use Of High-pressure Waterjetting Equipment and/or The Water Jetting Association's, WJA Code of Practice for additional safety information.

- Complete a job specific risk assessment and act on the resulting actions.
- Adhere to all site specific safety procedures.
- Ensure the waterblasting zone is properly barricaded and that warning signs are posted.
- Ensure the workplace is free of unnecessary objects (e.g. loose parts, hoses, tools).
- Ensure all Operators are using the correct Personal Protective Equipment (PPE).
- Check that the air hoses are properly connected and tight.
- Check all hoses and accessories for damage prior to use. Do not use damaged items. Only high quality hoses intended for waterblast applications should be used as high-pressure hoses.
- Check all high-pressure threaded connections for tightness.
- Operate the high-pressure water at full pressure and use the Pneumatic Foot Pedal Dump Control to verify that the dump valve is working properly.
- Ensure that Operators never connect, disconnect, or tighten hoses, adapters, or accessories with the high-pressure water pump unit running.
- Ensure no personnel are in the hydroblasting zone.

2" BADGER MODEL AND HEAD INFORMATION

2" BADGER MODELS

The BA-LKD-P4 / BA-LKD-BSPP4 / BA-LKD-MP6R / BA-LKD-MP9L / BA-LKD-MP9R are self-rotating swivels designed for cleaning 2" to 4" tubes and lines with bends and long radius elbows, such as U-Tubes and process lines.

The P4 and BSPP4 tools can be used at operating pressures up to 15,000 psi (1035 bar) and have either a 1/4"NPT or 1/4"BSPP female pipe thread inlet.

The MP6R, MP9L and MP9R tools at up to 22,000 psi (1500 bar). The MP6R tool has a 3/8" female right-hand medium pressure inlet. The MP9L tool has a 9/16" female left-hand medium pressure inlet and the MP9R has a 9/16" female right-hand medium pressure inlet.

The tools do not use any bearings, seals, or lubricating fluid. Rotation is powered by the jet thrust.

If a standard 1/4" NPT or BSPP hose end is used, they can pass through elbows in 3" and larger lines. If using the tool in 2" line a special shorter hose end is required to allow tool to travel through elbows. Contact StoneAge for more information on the hose requirements.

An OPTIONAL BA 530 Fairing Assembly is available for all 2" Badger models when using hose sizes up to 6mm. The fairing is designed to be attached to the back of the 2" Badger to help prevent the rear edge of the tool from getting caught on obstructions during withdrawal from tubes or lines.

DETERMINING HEAD TYPE:

Three different universal head options can meet different pressure and flow configurations. The drilled heads eliminate the need for replacing jet inserts. Operators can swap the drilled heads quickly to meet the unique demands of each job. Specification assistance is available through one of our StoneAge customer service reps at 1-866-795-1586. Or on line at www.stoneagetools.com

The chart below is calculated with hose pressure loss from 50 feet of 6 mm or 1/4" flex lance.

BA 530 Fairing

2" BADGER HEAD CHART					
MODEL / INLET CONNECTIONS	PRESSURE RANGE		FLOW RANGE		BA 546-LKD-X HEAD
	psi	bar	gpm	lpm	
BA-LKD-P4 1/4 NPT BA-LKD-BSPP4 1/4 BSPP	8-15K	552-1034	11-16	42-61	A
			9-12.5	34-47	B
			7-9.5	26-36	C
BA-LKD-MP6R 3/8 MP RIGHT	15-22K	1034-1500	16-18.5	61-70	A
BA-LKD-MP9L 9/16 MP LEFT			12.5-14.5	47-55	B
BA-LKD-MP9R 9/16 MPRIGHT			9.5-11	36-42	C

⚠ WARNING

Because of the short length of the Badger, the tool can turn around in large lines and come back at the operator at a high rate of speed. If cleaning larger lines, a rigid "stinger" should be used between the hose and the tool. It is recommended that the rigid length of the tool including hose end is 1-1/2 times the inside diameter of the line being cleaned (see below).

Make sure there is an operator controlled dump in the system, operated by the person closest to the cleaning job. The StoneAge ABX-500 and ABX-PRO Hose Tractors can be used to achieve safe and consistent feed rates for line cleaning.

Follow all operating instructions in this manual.

⚠ DANGER

If the 2" BADGER is being used in lines larger than 4 inch diameter, a rigid stinger should be installed between the tool inlet and the hose end; otherwise the tool can turn around and come back toward the operator, causing serious injury or death.

Operations with this equipment can be potentially hazardous. Caution must be exercised prior to and during machine and water jet tool use. Please read and follow all of these instructions, in addition to the guidelines in the WJTA Recommended Practices handbook, available online at www.wjta.org.

Deviating from safety instructions and recommended practices can lead to severe injury and/or death.

IMPROPER USE:
Badger will turn around in
large diameter line
VERY DANGEROUS!

PROPER USE:
Badger with rigid "stinger"
to prevent turnaround, still
able to pass through elbows.

2" BADGER OPERATION AND TROUBLESHOOTING

NOTICE

The most important item in maintaining the Badger tool is flushing high pressure hoses before use. This keeps debris from entering the tool and preventing a loss in rotation.

OPERATION

1. Make sure the operator has a controlled dump in the system and it is operated by the person closest to the job. Test the dump prior to beginning the job.
2. Flush out the high pressure hoses before connecting the Badger to eliminate debris.
3. Attach tool to the end of the hose. Use Parker Thread Mate and Teflon tape on all pipe thread connections (P4, BSPP4); use anti-seize on all straight thread connections (MP6R, MP9L, MP9R) to the swivel inlet.
4. The 2" Badger has a large O-Ring (WV 008) around the inlet. This O-Ring helps prevent the tool from getting caught on the rear edge when pulling the tool back out of the line. *An optional Fairing Assembly (BA 530) will also help prevent snagging during tool removal.*
5. It is recommended that the hose be marked a few feet from the end with a piece of tape so the operator knows when to stop on the way back out.
6. Position the tool in the line opening.
7. Close the dump and slowly bring the pump up to pressure the first time to make sure no nozzles are plugged and the jet thrust is correct. The Badger should begin to slowly rotate.
8. Once operating pressure is reached, feed the tool into the line to begin the cleaning job.
9. Allow the jets time to do their work by feeding the hose out at a controlled rate.
10. 2" BADGER ONLY- After the Badger is removed from the hose, blow out water with compressed air and spray a light oil such as WD-40 into the tool.

BA 530
Fairing

TROUBLESHOOTING

HEAD WILL NOT ROTATE:

- First, make sure the head (BA 546-LKD) is still tightened into the shaft (BA 501-LK). A safety feature built into the shaft stops the tool from rotating if the head comes loose.
- If the head isn't loose, try spraying a light oil such as WD-40 into the tool and rotate head by hand until it turns freely again.
- Make sure that the jets in the head are not plugged.
- If the tool still does not rotate after trying the steps above, it may need to be disassembled and cleaned on the inside. Follow the instructions in the "2" Badger Tool Service Information" section of this manual.

2" BADGER HEAD REPLACEMENT INFORMATION

Product training and proper tools are required to service this tool. If you are uncomfortable performing the service, bring the nozzle to your authorized dealer. Please go to the link below for more information and service videos for the 2 inch Badger.

<https://www.stoneagetools.com/2inch-badger>

BA 612-LK TOOL KIT INCLUDES:

- BA 182 Head Removal Tool
- BA 185 Red Loctite® 262
- WV 010 Retaining Rings (2)
- WV 181 Spanner Wrench

Loctite® is a registered trademark of Henkel AG & Co. KGaA.

TO REPLACE THE HEAD:

DISASSEMBLY:

1. Slide the BA 182 Head Removal Tool between the Head and the Shaft to release the Head Locking Pin. There is only one direction that will release the Pin. See the figure below.
2. Leave the Badger in the BA 182 Removal Tool and clamp the removal tool into a vise.
3. Using a small pick, remove the O-Ring.

RECOMMENDED GENERAL TOOLS:

(Not included in the BA-612-LK Kit)

- Bench Vise (recommended)
- Adjustable End Wrench
- 7/8" socket wrench
- Clean lint free rags or blue shop towels

4. Using a small flat head screw driver, pry the Retaining Ring off the Inlet Nut, and pull the Inlet nut out the Shaft.
5. Insert the two pins on the WV 181 Spanner Wrench into the two bores in the Shaft.
6. Rotate the Spanner Wrench Counterclockwise with an adjustable end wrench to remove the Head from the Shaft.

2" BADGER TOOL SERVICE INFORMATION

ASSEMBLY:

1. Apply 2-4 drops of BA 185 Red Loctite® 262 around the circumference of the threads on the Replacement Head prior to screwing it into the Shaft.
2. Care must be taken NOT to allow Red Loctite® into the internal shaft bore below the female threads or onto the tapered external surface of the shaft.
3. Slip the Removal Tool between the Head and the Body and clamp it into a vise.
4. Insert the WV 181 Spanner Wrench into the Shaft.
5. Using a 7/8" socket wrench, torque to 100 in-lbs
6. Install the Inlet Nut into the Shaft.
7. Always replace the Retaining Ring with a new one during each reassembly.
8. Finally, install the O-Ring.

Accessories

REQUIRED FOR BSPP
INLETS ONLY

4" BADGER TOOL MODEL AND HEAD INFORMATION

4" BADGER MODEL DESCRIPTION

The Badger™ Rotary Waterblast Nozzle was designed for waterblast cleaning of lines with as small as 4 inch with elbows. The tool has an outside diameter of 2"-8". A thin fluid is used for rotation speeds of 75 to 250 rpm. The fluid in the swivel can be changed to provide either fast or slow rotation. The Badger™ heads have five 1/8 NPT ports; See diagram and chart below.

NOZZLES AND PLUGS

The 4" Badger can be jetted in different configurations depending on the application. The table below shows commonly used nozzle/plug configurations for the 4" Badger tool.

4" BADGER NOZZLE AND PLUG CHART		
10° PORT	100° PORTS	135° PORTS
1 x Nozzle	2 x Nozzle	2 x Nozzle
1 x Plug	2 x Nozzle	2 x Nozzle
1 x Nozzle	2 x Plug	2 x Nozzle
1 x Plug	2 x Plug	2 x Nozzle

Nozzles are Part Number: AP2-XXX
Plugs are Part Number: GP 025-P2SS

Once you have confirmed the required jetting configuration, use the StoneAge Jetting App to determine nozzle sizes: [Jetting.stoneagetools.com](https://www.stoneagetools.com)

4" BADGER
5 Ports:
1 @ 10°
2 @ 100°
2 @ 135°

HEAD OFFSET OPTIONS

Engraved on each head is R18 or R22; this number is the offset of the head that makes it rotate. The general flow range for each head is given in the table; nozzle sizes must be selected to match the pressure and flow range. If the flow is less than the range shown, the tool will not rotate; if it is more than the allowable the tool may rotate too fast and wear out the seals and bearings.

4" BADGER HEAD OFFSET CHART					
MODEL / INLET CONNECTION	PRESSURE RANGE		FLOW RANGE		HEAD
	psi	bar	gpm	lpm	
BAE-P6 3/8 NPT FEMALE	5000-15K	345-1034	13-20	50-76	BAE 040-R22
			20-30	76-114	BAE 040-R18
BAE-BSPP6 3/8 BSPP FEMALE OR BAE-MP9R 9/16 FEMALE OR BAE-M24 X 1.5 24mm MALE	5000-22K	345-1500	12-19	45-72	BAE 040-R18
			19-27	72-102	BAE 040-R22

⚠ WARNING

Because of the short length of the Badger, the tool can turn around in large lines and come back at the operator at a high rate of speed. If cleaning larger lines, a rigid "stinger" should be used between the hose and the tool. It is recommended that the rigid length of the tool including hose end is 1-1/2 times the inside diameter of the line being cleaned (see below).

Make sure there is an operator controlled dump in the system, operated by the person closest to the cleaning job.

Follow all operating instructions in this manual.

⚠ DANGER

If the 4" BADGER is being used in larger diameter lines, a rigid stinger should be installed between the tool inlet and the hose end; otherwise the tool can turn around and come back toward the operator, causing serious injury or death.

Operations with this equipment can be potentially hazardous. Caution must be exercised prior to and during machine and water jet tool use. Please read and follow all of these instructions, in addition to the guidelines in the WJTA Recommended Practices handbook, available online at www.wjta.org.

Deviating from safety instructions and recommended practices can lead to severe injury and/or death.

IMPROPER USE:
Badger will turn around in
large diameter line
VERY DANGEROUS!

PROPER USE:
Badger with rigid "stinger"
to prevent turnaround, still
able to pass through elbows.

4" BADGER OPERATION AND TROUBLESHOOTING

OPERATION:

NOTICE

The two most important items in maintaining the Badger tools;

- Keep debris from entering the tool and preventing it from rotating by flushing high pressure hoses before use.

- Keep the 4" and 6" models full of viscous fluid to maintain control and rotation speed. When the viscous fluid is lost or contaminated, the rotation speed of the tool will increase, which reduce the life of the high pressure seal and bearing.

1. Make sure the operator has a controlled dump in the system and it is operated by the person closest to the job. Test the dump prior to beginning the job.
2. Flush out the high pressure hoses before connecting the Badger™ to eliminate debris.
3. Attach tool to the end of the hose.

TROUBLE SHOOTING:

HIGH-PRESSURE WATER SEAL LEAK:

- The high pressure seal may leak initially at lower pressures, but should pop closed as pressure is increased. A continuous leak at operating pressure from the weep holes indicates the need to replace the HP Seal and Seat. HP Seals wearing out too quickly can be an indication that the shaft bore is worn, the HP Seat is installed upside-down, or the tool is over spinning. Over spinning is caused by low or contaminated viscous fluid, water in the fluid chamber (replace shaft seals), or too much jet torque. Refilling the viscous fluid every 80-100 hours of operation is important for proper speed control. Only use StoneAge recommended viscous fluid.

TOOL SPINS TOO FAST:

- A significant increase in rotation speed means that the speed control mechanism in the tool has lost functionality. This can be a result of viscous fluid loss or fluid contamination. Operation of the tool in this state can cause damage to other components and accelerated wear of the high pressure seal. If this occurs, the first step is to flush the tool with new viscous fluid as shown below.

4. It is recommended that the hose be marked a few feet from the end with a piece of tape so the operator knows when to stop on the way back out.
5. Position the tool in the pipe opening.
6. Close the dump and slowly bring the pump up to pressure the first time to make sure no nozzles are plugged and the jet thrust is correct. The Badger should begin to slowly rotate.
7. Once operating pressure is reached, feed the tool into the pipe to begin the cleaning job.
8. Allow the jets time to do their work by feeding the hose out at a controlled rate.
9. When the work is complete and the tool is disconnected from the hose, blow out all water to prolong the life of the tool.
10. A small amount of 3-IN-ONE or equivalent lubricant can be blown into the tool as well.

TOOL WILL NOT ROTATE:

- Check the nozzles for plugging or wear (nozzles have to be removed to check for obstructions), Check that the nozzle sizes are correct for the desired flow and that the desired flow matches the head flow range. Check that the nozzle sizes are installed in a balanced configuration. If the tool feels rough when manually rotating the head, this indicates internal damage. Replace bearings, shaft seals, viscous fluid, and check the Inner and Outer Discs for flatness. These discs can be deformed if tool is reassembled when discs are not properly aligned with the internal flats inside the head.

TOOL SERVICE

Product training and proper tools are required to service this tool. If you are uncomfortable performing the service, bring the nozzle to your authorized dealer. Please go to the link below for more information and service videos for the 4 inch Badger.

<https://www.stoneagetools.com/4inch-badger>

The use of a bench vice and an arbor press is highly helpful. Take care throughout the entire procedure to keep the internals clean and free from grit, lint, and contamination. Failure to do so could result in premature tool failure after service.

LIST OF TOOLS:

- Bench Vise (recommended)
- Arbor Press (recommended)
- 18" adjustable wrench (such as Crescent® C718 Automatic Adjustable Pipe Wrench)
- 13/16" open end wrench or small adjustable Crescent® Wrench
- Medium size flat-head screw driver
- Pick
- BAE 612 Tool Kit for 4" Badger Includes;
BAE 181 Wrench
BA 105 Seal Press Tool

LIST OF MATERIALS:

- Clean lint free rags or shop towels
- Anti-Seize - Swagelok® Blue Goop® StoneAge PN (GP 043 Blue Goop)
- Grease - Chevron Multifak® EP1 StoneAge PN (GP 049)
- Isopropyl Alcohol or Denatured Alcohol

Blue Goop® is a registered trademark of Swagelok® Company

Multifak® is a registered trademark of Chevron® Corporation.

VISCOUS FLUID FLUSH INSTRUCTIONS

1. Remove both Port Plugs in the Head (BAE 040-RXX) (see below).
2. Fill the Syringe with viscous fluid by removing the end near the handle, pulling out the plunger, and pouring the Viscous Fluid (BJ 048-F) in to fill the Syringe Body. With plunger re-installed, purge air out of Syringe hose.
3. Thread the syringe end into a port in the Head. Hold the tool sideways, so the bleed port is on top and the injection port is on the bottom. Squeeze fresh Viscous Fluid in until clean Viscous Fluid comes out the bleed port. Keep flushing new fluid until air bubbles stop coming out of the bleed port.
4. Install a Port Plug into the bleed side first. Remove the Syringe and install the Port Plug back into the Injection side port.

4" BADGER DISASSEMBLY

DISASSEMBLY

1. Use an adjustable end or BAE 181 wrench on the flats of the Nut and remove it from the Head.
2. Slip off the Wear Ring.
3. Lift the Shaft Assembly out of the head.

Figure 1: For Steps 1-3

4. Use a small pick to remove the Carbide Seat and H.P. Seal from the bore of the Shaft.

Figure 2: For Step 4

5. Use a small screw driver or pick to remove the Retaining Ring from the shaft.
6. Pull the Discs and O-Rings off of the Shaft.

Figure 3: For Step 5-6

7. Use an arbor press to press the Bearing off of the Shaft. Be sure the bearing is set flat on the press before applying pressure. Pressing the shaft out of the bearing at an angle could cause damage to the bearing.

Figure 4: For Step 7

8. Use a small pick to remove the O-Ring and the Shaft Seal and inspect both for damage.

Figure 5: For Step 8

9. Remove both Port Plugs from the Head.
10. Use a flat head screwdriver to remove the Shaft Seal and inspect for damage.

Figure 6: For Steps 9-10

NOTICE

Before reassembly of the tool
Wash all parts in solvent and blow dry
and
Inspect wear items, (High Pressure Seal
Assembly, O-Rings, and Port Screw.)

See the "Maintenance Kits" section of this
manual for a complete list of Service, Overhaul,
and, Tool kits.

4" BADGER ASSEMBLY

ASSEMBLY

GREASE = Chevron Multifak® EP1 Tan

ANTI-SEIZE = Swagelock® Blue Goop or Equal

1. Grease the open side of the Bearing.
2. Note the orientation of the Bearing before pressing it onto the Shaft. The greased side should be down. Use an arbor press to press the Bearing onto the Shaft. Be sure the bearing is set flat on the press before applying pressure. Pressing the shaft into the bearing at an angle could cause damage to the bearing.

Figure 7: For Steps 1-2

3. Align the internal flats of an Inner Disc with the flats of the Shaft and place over the Shaft.
4. Place an O-Ring on top of this Disc.
5. Place an Outer Disc on after the O-Ring. *The external flats of the Outer Discs should be aligned with the flats inside the head.*
6. Repeat these steps until there are three Outer Discs and four Inner Discs on the Shaft.
7. Push down on top disc and install the Retaining Ring in the groove around the Shaft.

Figure 8: For Steps 3-7

8. Apply grease to the H.P. Seal and install into the bore of the Shaft.
9. Apply grease to the Flat Face of the Seat and place into the bore of the Shaft, on top of H.P. Seal, as shown.

Figure 9: For Steps 8-9

10. Install the Shaft Seal into the center of the Nut with the lip spring side up.
11. Install the O-Ring in the groove in the bottom of the Nut.

Figure 10: For Steps 10-11

12. Install the Shaft Seal into the Head with the lip spring side up.

Figure 11: For Step 12

13. Align the flats on the Outer Discs with the flats inside the Head; slide shaft assembly into the Head.
14. Apply anti-seize to threads on Head; install the Wear Ring onto the Head; thread the Nut onto the Head and tighten to 50 ft-lb.
15. Follow the "Lubricant Replacement Instructions" Section before installing the Port Plugs back into the head.

Figure 12: For Steps 13-15

6" BADGER TOOL MODEL AND HEAD INFORMATION

6" BADGER MODELS DESCRIPTION

The 6 inch Badger™ Rotary Waterblast Nozzles were designed to clean lines with as small as 6 inch with elbows. The 6 inch Badger™ has an adjustable speed mechanism that allows rotation speed to be changed. See the "Speed Control Adjustment" section in this manual for instructions on how to adjust the Speed Control mechanism.

NOZZLES AND PLUGS

The 6" Badger can be jetted in different configurations depending on the application. The table below shows commonly used nozzle/plug configurations for the 6" Badger tool.

6" BADGER NOZZLE AND PLUG CHART		
15° PORT	100° PORTS	135° PORTS
1 x Nozzle	2 x Nozzle	2 x Nozzle
1 x Plug	2 x Nozzle	2 x Nozzle
1 x Nozzle	2 x Plug	2 x Nozzle
1 x Plug	2 x Plug	2 x Nozzle

Nozzles are Part Number: APF4-XXX

Plugs are Part Number: GP 025-P4SS

Once you have confirmed the required jetting configuration, use the StoneAge Jetting App to determine nozzle sizes:

Jetting.stoneagetools.com

HEAD OFFSET OPTIONS

Engraved on each head is R21, R31, or R40; this number is the offset of the head that makes it rotate. The general flow range for each head is given in the table; nozzle sizes must be selected to fit within this flow range. If the flow is less than the range shown, the tool will not rotate; it is okay to use more than the allowable, but the tool **MUST** be slowed down using the adjustable speed mechanism to prevent over-speeding and damaging the tool.

6" BADGER HEAD OFFSET CHART

MODEL/ INLET CONNECTION	PRESSURE RANGE		FLOW RANGE		HEAD
	psi	bar	gpm	lpm	
BA-P8 1/2 NPT FEMALE	2000-10K	140-690	15-24	57-91	BA 340-R40

			30-43	114-163	BA 340-R21

6" BADGER WARNING AND SAFETY INSTRUCTIONS

⚠ WARNING

Because of the short length of the Badger, the tool can turn around in large lines and come back at the operator at a high rate of speed. If cleaning larger lines, a rigid "stinger" should be used between the hose and the tool. It is recommended that the rigid length of the tool including hose end is 1-1/2 times the inside diameter of the line being cleaned (see below).

Make sure there is an operator controlled dump in the system, operated by the person closest to the cleaning job.

Follow all operating instructions in this manual.

⚠ DANGER

Operations with this equipment can be potentially hazardous. Caution must be exercised prior to and during machine and water jet tool use. Please read and follow all of these instructions, in addition to the guidelines in the WJTA Recommended Practices handbook, available online at www.wjta.org.

Deviating from safety instructions and recommended practices can lead to severe injury and/or death.

IMPROPER USE:
Badger will turn around in
large diameter line
VERY DANGEROUS!

PROPER USE:
Badger with rigid "stinger"
to prevent turnaround, still
able to pass through elbows.

OPERATION:

NOTICE

The two most important items in maintaining the Badger tools;

- Keep debris from entering the tool and preventing it from rotating by flushing high pressure hoses before use.
- Keep the 4" and 6" models full of viscous fluid to maintain control and rotation speed. When the viscous fluid is lost or contaminated, the rotation speed of the tool will increase, which reduce the life of the high pressure seal and bearing.

1. Make sure the operator has a controlled dump in the system and it is operated by the person closest to the job. Test the dump prior to beginning the job.
2. Flush out the high pressure hoses before connecting the Badger™ to eliminate debris.
3. Attach tool to the end of the hose.

TROUBLESHOOTING:

HIGH-PRESSURE WATER SEALS LEAK:

- The high pressure seal may leak initially at lower pressures, but should pop closed as pressure is increased. A continuous leak at operating pressure from the weep holes indicates the need to replace the HP Seal and Seat. HP Seals wearing out too quickly can be an indication that the shaft bore is worn, the HP Seat is installed upside-down, or the tool is over spinning. Over spinning is caused by low or contaminated viscous fluid, water in the fluid chamber (replace shaft seals), or too much jet torque. Refilling the viscous fluid every 30-40 hours of operation is important for proper speed control. Only use StoneAge recommended viscous fluid.

TOOL SPINS TOO FAST:

- A significant increase in rotation speed means that the speed control mechanism in the tool has lost functionality. This can be a result of viscous fluid loss or fluid contamination. Operation of the tool in this state can cause damage to other components and accelerated wear of the high pressure seal. If this occurs, the first step is to flush the tool with new viscous fluid as shown below.

4. It is recommended that the hose be marked a few feet from the end with a piece of tape so the operator knows when to stop on the way back out.
5. Position the tool in the line opening.
6. Close the dump and slowly bring the pump up to pressure the first time to make sure no nozzles are plugged and the jet thrust is correct. The Badger should begin to slowly rotate.
7. Once operating pressure is reached, feed the tool into the line to begin the cleaning job.
8. Allow the jets time to do their work by feeding the hose out at a controlled rate.
9. When the work is complete and the tool is disconnected from the hose, blow out all water to prolong the life of the tool.
10. 4" & 6" BADGERS ONLY- A small amount of 3-IN-ONE or equivalent lubricant can be blown into the tool as well.

TOOL WILL NOT ROTATE:

- Check the nozzles for plugging or wear (nozzles have to be removed to check for obstructions), Check that the nozzle sizes are correct for the desired flow and that the desired flow matches the head flow range. Check that the nozzle sizes are installed in a balanced configuration. If the tool feels rough when manually rotating the head, this indicates internal damage. Replace bearings, shaft seals, viscous fluid, and check the Inner and Outer Discs for flatness. These discs can be deformed if tool is reassembled when discs are not properly aligned with BA 018 Pins.

6" BADGER SPEED ADJUSTMENT

THE SPEED CONTROL

The adjustable speed control feature allows for rotational speed adjustment within the speed ranges of the selected viscous fluid.

For the fastest speed setting, the Shaft Adjust Sleeve (BA 303) is backed out all the way against the shoulder of the shaft.

The slowest speed setting is about 1-1/4 turn inward. Do not force the adjustment in this direction.

ADJUSTING THE SPEED CONTROL

To adjust the speed, hold the wrench flats on the shaft while turning the Shaft Adjust Sleeve with a 1 1/4" Open End Wrench. This Badger uses fast viscous fluid for speed control and bearing lubrication.

TECH TIP:

When making adjustments, it is recommended to adjust the sleeve about a quarter turn beyond the desired setting and then backing it off a quarter turn, thus allowing the viscous fluid to equalize more uniformly.

TOOL SERVICE

Product training and proper tools are required to service this tool. If you are uncomfortable performing the service, bring the nozzle to your authorized dealer. Please go to the link below for more information and service videos for the 6 inch Badger.

<https://www.stoneagetools.com/6inch-badger>

The use of a bench vice and an arbor press is highly helpful. Take care throughout the entire procedure to keep the internals clean and free from grit, lint, and contamination. Failure to do so could result in premature tool failure after service.

LIST OF TOOLS:

- Bench Vise (recommended)
- Arbor Press (recommended)
- 18" Adjustable Wrench (such as Crescent® C718 Automatic Adjustable Pipe Wrench)
- 1¼" Open End Wrench
- Medium size flat-head screw driver
- Pick
- Bearing Splitter
- 3/8 Drive Ratchet with 3" Extension
- BA 612-P8/M9 Tool Kit for 6" Badger Includes;
BA 100 Retaining Ring Pliers
BA 105 Seal Press Tool

LIST OF MATERIALS:

- Clean lint free rags or shop towels
- Blue Loctite® 242
- Anti-Seize - Swagelok® Blue Goop® StoneAge PN (GP 043 Blue Goop)
- Grease - Chevron Multifak® EP1 StoneAge PN (GP 049)
- Isopropyl Alcohol or Denatured Alcohol

Blue Goop® is a registered trademark of Swagelok® Company

Multifak® is a registered trademark of Chevron® Corporation.

VISCOUS FLUID FLUSH INSTRUCTIONS

1. Remove the Port Plugs (BJ 026) in the Nut (BA 302) and Head (BA 340-RXX).
2. Fill the Syringe (BC 410) with viscous fluid by removing the end near the handle, pulling out the plunger, and pouring the Viscous Fluid (BJ 048-F) in to fill the Syringe Body. With plunger re-installed, purge air out of Syringe hose.
3. Thread the syringe end into the port in the Head, and squeeze fresh Viscous Fluid in until clean Viscous Fluid comes out the port in the Nut. Hold the tool so the port in the Nut is the highest point. If air bubbles come out of the port on the nut, keep flushing new fluid until air bubbles stop.
4. Install Port Plug into Nut first. Remove the Syringe and install the Port Plug in the Head.

Viscous Fluid Flush

6" BADGER DISASSEMBLY

DISASSEMBLY

1. Unscrew the Nut from the Head.
2. Pull the Shaft/Bearing/Disc Assembly out of the Head.

Figure 1: For Steps 1-2

3. Remove the Seat, H.P. Seal, and Wave Spring from the bore of the Shaft.

Figure 2: For Step 3

4. Remove the Bearing and Retaining Ring from the Shaft.
5. Pull the Inner and Outer Discs and O-Rings off of the Shaft.

Figure 3: For Step 4-5

6. Press the Bearing off of the Shaft Adjust Sleeve.
7. There is no need to remove the Pins from the Shaft; however, if they fall out do not lose them.
8. If the Shaft Adjust Sleeve fails to remain in the set position while the tool is in use, it may be necessary to unscrew the Shaft from the Shaft Adjust Sleeve in order to replace the (2) O-Rings. Normally it is not necessary to disassemble the Shaft from the Adjust Sleeve.

Figure 4: For Steps 6-8

9. Remove the Shaft Seal and inspect for damage.
10. Remove the Port Screw from the Nut.

Figure 5: For Steps 9-10

11. Remove the Port Screw from the Head.
12. Remove the Shaft Seal and O-Ring if they are damaged.
13. There is no need to remove the Pins; however, if they fall out, do not lose them.

Figure 6: For Steps 11-13

6" BADGER ASSEMBLY

ASSEMBLY

GREASE = Chevron Multifak® EP1 Tan

ANTI-SEIZE > = Swagelock® Blue Goop or *Equal*

1. Press Bearing onto Shaft Adjust Sleeve.
2. Check that Pins are installed in Shaft.

Insert Pins just far enough to — clear groove for retaining ring

Figure 7: For Steps 1-2

3. Place an Inner Disc on Shaft, aligning with pins.
4. Place an O-Ring on top of this Disc, stretched around the pins.
5. Place an Outer Disc around the outside of this O-Ring
6. Place another Inner Disc, and also place an O-Ring around the outer edge of this Disc.
7. Repeat steps 3 through 6, until there are four Outer Discs and five Inner Discs on Shaft. Note that there is no outer O-Ring on the Inner Discs at each end of the stack.
8. Push down on top disc and install the Retaining Ring in the groove around Shaft. Install Bearing on shaft.

Figure 8: For Step 3-8

9. Insert Wave Spring into bore of Shaft.
10. Apply grease to and install the H.P. Seal in bore of Shaft.
11. Apply grease to the flat face of the Seat and place in bore of Shaft, on top of Seal, as shown.

Figure 9: For Steps 9-11

12. Install Shaft Seal in the Nut as shown.

Figure 10: For Step 12

13. Install Shaft Seal into the bore in the Head and the O-Ring over threads and into groove of Head.

14. Check that the Pins are installed in the Head.

Figure 11: For Step 13-14

15. Align the notches on the Outer Discs with the pins in the Head; slide shaft assembly into the Head, taking care that the outer O-Rings remain captured between the Discs.
16. Apply anti-seize to threads on Head; install Wear Ring onto the Nut; thread the Nut onto the Head. **Tighten to 50 ft-lbs.**
17. Go to the "Tool Service and Viscous Fluid Information" Section in this manual for filling instructions. Port screws will be installed after filling.

TERMS AND CONDITIONS AND WARRANTY INFORMATION

1. Acceptance of Terms and Conditions. Receipt of these Terms and Conditions of Sale ("Terms and Conditions") shall operate as the acceptance by StoneAge, Inc. ("Seller") of the order submitted by the purchaser ("Buyer"). Such acceptance is made expressly conditional on assent by Buyer to these Terms and Conditions. Such assent shall be deemed to have been given unless written notice of objection to any of these Terms and Conditions (including inconsistencies between Buyer's purchase order and this acceptance) is given by Buyer to Seller promptly on receipt hereof.

Seller desires to provide Buyer with prompt and efficient service. However, to individually negotiate the terms of each sales contract would substantially impair Seller's ability to provide such service. Accordingly, the product(s) furnished by Seller are sold only according to the terms and conditions stated herein and with the terms and conditions stated in any effective StoneAge Dealer Agreement or StoneAge Reseller Agreement, if applicable. Notwithstanding any terms and conditions on Buyer's order, Seller's performance of any contract is expressly made conditional on Buyer's agreement to these Terms and Conditions unless otherwise specifically agreed to in writing by Seller. In the absence of such agreement, commencement of performance, shipment and/or delivery shall be for Buyer's convenience only and shall not be deemed or construed to be an acceptance of Buyer's terms and conditions.

2. Payment/Prices. Unless other arrangements have been made in writing between Seller and Buyer, payment for the product(s) shall be made upon receipt of invoice. The prices shown on the face hereof are those currently in effect. Prices invoiced shall be per pricelist in effect at the time of shipment. Prices are subject to increase for inclusion of any and all taxes which are applicable and which arise from the sale, delivery or use of the product(s), and the collection of which Seller is or may be responsible to provide to any governmental authority, unless acceptable exemption certificates are provided by Buyer in accordance with applicable law. Buyer shall pay all charges for transportation and delivery and all excise, order, occupation, use or similar taxes, duties, levies, charges or surcharges applicable to the product(s) being purchased, whether now in effect or hereafter imposed by any governmental authority, foreign or domestic.

3. Warranty. SELLER MAKES NO WARRANTIES OR REPRESENTATIONS AS TO THE PERFORMANCE OF ANY PRODUCT EXCEPT AS SET FORTH IN THE STONEAGE LIMITED WARRANTY PROVIDED WITH THE PRODUCT.

4. Delivery. Seller is not obligated to make delivery by a specified date, but will always use its best efforts to make delivery within the time requested. The proposed shipment date is an estimate. Seller will notify Buyer promptly of any material delay and will specify the revised delivery date as soon as practicable. UNDER NO CIRCUMSTANCES SHALL SELLER HAVE ANY LIABILITY WHATSOEVER FOR LOSS OF USE OR FOR ANY DIRECT OR CONSEQUENTIAL DAMAGES RESULTING FROM DELAY REGARDLESS OF THE REASON(S).

All product(s) will be shipped F.O.B. point of origin, unless specifically agreed otherwise, and Buyer shall pay all shipping costs and insurance costs from that point. Seller, in its sole discretion, will determine and arrange the means and manner of transportation of the product(s). Buyer shall bear all risk of loss commencing with the shipment or distribution of the product(s) from Seller's warehouse. Order shortages or errors must be reported within fifteen (15) business days from receipt of shipment to secure adjustment. No product(s) may be returned without securing written approval from Seller.

5. Modification. These Terms and Conditions are intended by Seller and Buyer to constitute a final, complete and exclusive expression of agreement relating to the subject matter hereof and cannot be supplemented or amended without Seller's prior written approval.

6. Omission. Seller's waiver of any breach or Seller's failure to enforce any of these Terms and Conditions at any time, shall not in any way affect, limit or waive Seller's right thereafter to enforce and compel strict compliance with every term and condition hereof.

7. Severability. If any provision of these Terms and Conditions is held to be invalid or unenforceable, such invalidity or unenforceability shall not affect the validity or enforceability of the other portions hereof.

8. Disputes. Seller and Buyer shall attempt in good faith to promptly resolve any dispute arising under these Terms and Conditions by negotiations between representatives who have authority to settle the controversy. If unsuccessful, Seller and Buyer shall further attempt in good faith to settle the dispute by nonbinding third-party mediation, with fees and expenses of such mediation apportioned equally to each side. Any dispute not so resolved by negotiation or mediation may then be submitted to a court of competent jurisdiction in accordance with the terms hereof. These procedures are the exclusive procedures for the resolution of all such disputes between the Seller and Buyer.

TERMS AND CONDITIONS AND WARRANTY INFORMATION

9. Governing Law. All sales, agreements for sale, offers to sell, proposals, acknowledgments and contracts of sale, including, but not limited to, purchase orders accepted by Seller, shall be considered a contract under the laws of the State of Colorado and the rights and duties of all persons, and the construction and effect of all provisions hereof shall be governed by and construed according to the laws of such state.

10. Jurisdiction and Venue. Seller and Buyer agree that the state or federal courts located within the City and County of Denver, Colorado shall have sole and exclusive jurisdiction over any litigation concerning any dispute arising under these Terms and Conditions not otherwise resolved pursuant to Section 9 as well as any alleged defects of any Products or damages sustained as a result of such alleged defects. Seller and Buyer further agree that should any litigation be commenced in connection with such a dispute, it shall only be commenced in such courts. Seller and Buyer agree to the exclusive jurisdiction of such courts and neither will raise any objection to the jurisdiction and venue of such courts, including as a result of inconvenience.

11. Attorney's Fees. If any litigation is commenced between Seller and Buyer, or their personal representatives, concerning any provision hereof, the party prevailing in the litigation shall be entitled, in addition to such other relief that is granted, to a reasonable sum as and for their attorneys' fees and costs in such litigation or mediation.

STONEAGE TERMS AND WARRANTY

View StoneAge's Terms and Warranty Conditions online.

<http://www.stoneagetools.com/terms>

<http://www.stoneagetools.com/warranty>

TERMS AND CONDITIONS AND WARRANTY INFORMATION

WARRANTY:

Warranties set forth herein extend only to End-Users, meaning customers acquiring, or that have previously acquired, a product manufactured by StoneAge ("Product") for their own use and not for resale, either directly from StoneAge Inc. ("StoneAge") or from a StoneAge Authorized Dealer or Reseller ("Dealer"). No warranty of any kind or nature is made by StoneAge beyond those expressly stated herein.

1. LIMITED WARRANTY PERIOD. Subject to the limitations and conditions hereinafter set forth, StoneAge warrants its Product to be free from defects in workmanship and material for a period of one (1) year from the date of purchase by the End-User, provided that the end of the limited warranty period shall not be later than eighteen (18) months from the date of shipment of the Product to the Dealer or the End-User by StoneAge ("Limited Warranty Period"). All replacement parts which are furnished under this Limited Warranty and properly installed shall be warranted to the same extent as the original Product under this Limited Warranty if, and only if, the original parts were found to be defective within the original Limited Warranty Period covering the original Product. Replacement parts are warranted for the remainder of the original Limited Warranty Period. This Limited Warranty does not cover any component part of any Product not manufactured by StoneAge. Any such component part is subject exclusively to the component manufacturer's warranty terms and conditions.

2. LIMITED WARRANTY COVERAGE. StoneAge's sole obligation under this Limited Warranty shall be, at StoneAge's option and upon StoneAge's inspection, to repair, replace or issue a credit for any Product which is determined by StoneAge to be defective in material or workmanship. StoneAge reserves the right to examine the alleged defective Product to determine whether this Limited Warranty is applicable, and final determination of limited warranty coverage lies solely with StoneAge. No statement or recommendation made by a StoneAge representative, Dealer or agent to End-User shall constitute a warranty by StoneAge or a waiver or modification to any of the provisions hereof or create any liability for StoneAge.

3. WARRANTY SERVICE PROVIDERS. Service and repair of the Product is to be performed only by StoneAge authorized service representatives, including Dealers who are authorized repair centers, with StoneAge approved parts. Information about StoneAge authorized service representatives can be obtained through the StoneAge website at www.stoneagetools.com/service. Unauthorized service, repair or modification of the Product or use of parts not approved by StoneAge will void this Limited Warranty. StoneAge reserves the right to change or improve the material and design of the Product at any time without notice to End-User, and StoneAge is not obligated to make the same improvements during warranty service to any Product previously manufactured.

4. WARRANTY EXCLUSIONS. This Limited Warranty does not cover, and StoneAge shall not be responsible for the following, or damage caused by the following: (1) any Product that has been altered or modified in any way not approved by StoneAge in advance in writing; (2) any Product that has been operated under more severe conditions or beyond the rated capacity specified for that Product; (3) depreciation or damage caused by normal wear and tear, failure to follow operation or installation instructions, misuse, negligence or lack of proper protection during storage; (4) exposure to fire, moisture, water intrusion, electrical stress, insects, explosions, extraordinary weather and/or environmental conditions including, but not limited to lightning, natural disasters, storms, windstorms, hail, earthquakes, acts of God or any other force majeure event; (5) damage to any Product caused by any attempt to repair, replace, or service the Product by persons other than StoneAge authorized service representatives; (6) costs of normal maintenance parts and services; (7) damage sustained during unloading, shipment or transit of the Product; or (8) failure to perform the recommended periodic maintenance procedures listed in the Operator's Manual accompanying the Product.

5. REQUIRED WARRANTY PROCEDURES. To be eligible for warranty service, the End-User must: (1) report the Product defect to the entity where the Product was purchased (i.e. StoneAge or the Dealer) within the Limited Warranty Period specified in this Limited Warranty; (2) submit the original invoice to establish ownership and date of purchase; and (3) make the Product available to a StoneAge authorized service representative for inspection to determine eligibility for coverage under this Limited Warranty. This Limited Warranty shall not extend to any person or entity who fails to provide proof of original purchase from StoneAge or a Dealer. No Product may be returned for credit or adjustment without prior written permission from StoneAge.

6. DISCLAIMER OF IMPLIED WARRANTIES AND OTHER REMEDIES. EXCEPT AS EXPRESSLY STATED HEREIN (AND TO THE FULLEST EXTENT ALLOWED UNDER APPLICABLE LAW), STONEAGE HEREBY DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, AND ANY AND ALL WARRANTIES, REPRESENTATIONS OR PROMISES AS TO THE QUALITY, PERFORMANCE OR FREEDOM FROM DEFECT OF THE PRODUCT COVERED BY THIS LIMITED WARRANTY. STONEAGE FURTHER DISCLAIMS ALL IMPLIED INDEMNITIES.

TERMS AND CONDITIONS AND WARRANTY INFORMATION

7. LIMITATION OF LIABILITY. End-User specifically acknowledges that the Product may be operated at high speeds and/or pressures, and that as such it may be inherently dangerous if not used correctly. End-User shall familiarize itself with all operation materials provided by StoneAge and shall at all times use and require its agents, employees and contractors to use all necessary and appropriate safety devices, guards and proper safe operating procedures. In no event shall StoneAge be responsible for any injuries to persons or property caused directly or indirectly by the operation of the Product if End-User or any agent, employee, or contractor of End-User: (1) fails to use all necessary and appropriate safety devices, guards and proper safe operating procedures; (2) fails to maintain in good working order such safety devices and guards; (3) alters or modifies the Product in any way not approved by StoneAge in advance in writing; (4) allows the Product to be operated under more severe conditions or beyond the rated capacity specified for the Product; or (5) otherwise negligently operates the Product. End-User shall indemnify and hold StoneAge harmless from any and all liability or obligation incurred by or against StoneAge, including costs and attorneys' fees, to or by any person so injured.

TO THE FULL EXTENT ALLOWED BY APPLICABLE LAW, STONEAGE SHALL NOT BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR PUNITIVE DAMAGES (INCLUDING WITHOUT LIMITATION, LOSS OF PROFITS, LOSS OF GOODWILL, DIMINUTION OF VALUE, WORK STOPPAGE, INTERRUPTION OF BUSINESS, RENTAL OF SUBSTITUTE PRODUCT, OR OTHER COMMERCIAL LOSS EVEN TO THE EXTENT SUCH DAMAGES WOULD CONSTITUTE DIRECT DAMAGES), WITH RESPECT TO THE COVERED STONEAGE PRODUCT, OR OTHERWISE IN CONNECTION WITH THIS LIMITED WARRANTY, REGARDLESS OF WHETHER STONEAGE HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

IT IS UNDERSTOOD THAT STONEAGE'S LIABILITY, WHETHER IN CONTRACT, IN TORT, UNDER ANY WARRANTY, IN NEGLIGENCE, OR OTHERWISE SHALL NOT EXCEED THE AMOUNT OF THE PURCHASE PRICE PAID BY THE END-USER FOR THE PRODUCT. STONEAGE'S MAXIMUM LIABILITY SHALL NOT EXCEED, AND END-USER'S REMEDY IS LIMITED TO EITHER (1) REPAIR OR REPLACEMENT OF THE DEFECTIVE WORKMANSHIP OR MATERIAL OR, AT STONEAGE'S OPTION, (2) REFUND OF THE PURCHASE PRICE, OR (3) ISSUANCE OF A CREDIT FOR THE PURCHASE PRICE, AND SUCH REMEDIES SHALL BE END-USER'S ENTIRE AND EXCLUSIVE REMEDY.

YOU, THE END-USER, UNDERSTAND AND EXPRESSLY AGREE THAT THE FOREGOING LIMITATIONS ON LIABILITY ARE PART OF THE CONSIDERATION IN THE PRICE OF THE STONEAGE PRODUCT YOU PURCHASED.

Some jurisdictions do not allow the limitation or exclusion of liability for certain damages, so the above limitations and exclusions may not apply to you. This Limited Warranty gives you specific legal rights, and you may also have other rights which vary from jurisdiction to jurisdiction. If any provisions of this Limited Warranty is held to be invalid or unenforceable, such invalidity or unenforceability shall not affect the validity or enforceability of the other portions hereof.
